

Jeanmarck R. Ceant

[Portfolio](#)[\(631\) 809-1140](tel:(631)809-1140)jrc9921@nyu.edu[LinkedIn](#)[GitHub](#)

Education

New York University, College of Arts and Science & Tandon School of Engineering
Manhattan, NY and Brooklyn, NY

Bachelor of Science in Computer Science and Electrical Engineering

May 2027

Technical Skills

Languages: C, C++, Assembly (x86-64), Java, Python, HTML, JavaScript, CSS

Tools/Technologies: TensorFlow, PyTorch, Pandas, NumPy, Matplotlib, Seaborn, SciPy, Docker, VMs, Git/GitHub

Platforms/Hardware: Windows/Linux/UNIX, Raspberry Pi, Microcontrollers, Electrical Circuits

Projects

Project Rene Biotech Food Analysis App

Aug. 2024 – Present

- Built a YOLOv8-powered object detection system with SAM2 segmentation to analyze overlapping grocery items and provide real-time nutritional insights.
- Integrated OpenFDA APIs and used GitHub for collaboration and version control, enabling accurate data sourcing and transparent team progress.
- Designed a Python-based health flagging system with Matplotlib to guide consumer dietary decisions.
- Tuned TensorFlow models across diverse datasets to ensure high accuracy in varied store environments.

NYU Datathon – 1st Place

Apr. 2024

- Trained a ResNet-18 model to classify warehouse construction phases from satellite imagery.
- Predicted urban development timelines in Atlanta using transfer learning and historical data.
- Delivered a high-accuracy solution that won 1st place among 50+ teams.

Smart Watering System (Raspberry Pi, IoT Sensors)

Jan. 2023

- Co-designed a Raspberry Pi-based automated irrigation system with IoT moisture sensors and real-time feedback loops.
- Modeled a 3D sensor layout in Autodesk Fusion to optimize water distribution and placement.
- Wrote C programs for sensor data handling and microcontroller communication.

Experience

AI Research Assistant, Diabetic Retinopathy Detection (NYU)

Jan. 2025 – Present

- Developing a CNN model (ResNet, EfficientNet) to classify Diabetic Retinopathy across five severity levels.
- Preprocessing EyePACS and APTOS datasets using augmentation techniques to address class imbalance.
- Using ROC-AUC and Grad-CAM to evaluate model performance and ensure clinical relevance.

Research Intern, NYU Langone

Jun. 2024 – Dec. 2024

- Built a pipeline to analyze plasma metabolomics data for recurrent pregnancy loss research.
- Configured MS-DIAL 4 on virtual machines to enable large-scale non-targeted analysis.
- Worked with clinicians to extract biomarkers and inform early diagnostic pathways.

Research Intern, NYU Tandon

Sep. 2023 – May 2024

- Created a Python program using Difference-in-Differences to assess the effect of gun laws on public safety.
- Built a pipeline to collect, clean, and standardize public policy datasets.
- Delivered visualizations and statistical models for actionable policy recommendations.

Clubs & Activities

Haitian American Student Association (HASA)

2023 – 2024

Former E-Board Member, Media Relations Manager

Promoted Haitian culture across NYU through event marketing, social media campaigns, and collaborative programming that built inclusive community spaces for Caribbean-identifying students.

Black in STEM (BIS), NYU

2023 – Present

Co-Creator & E-Board Member

Launched a student-led initiative to support Black and Latinx students in STEM through curated class reviews, mentorship, and study guides for high-attrition courses like Data Structures and General Physics.

National Society of Black Engineers (NSBE), NYU Chapter

2023 – Present

Alumni Chair

Organize alumni panels and professional networking events; lead NYU delegation in national conference preparation and support underrepresented engineering students in career exploration.
